PROFESSIONAL SUMMARY

Backend Developer and BS Artificial Intelligence student with hands-on experience building database-driven applications using Python, Django and Django REST Framework. Built complex portfolio projects including a multi-vendor e-commerce marketplace and an enterprise-style retail management system. Experienced with PostgreSQL, Redis, Elasticsearch, Celery, WebSockets, Docker and backend security practices.

TECHNICAL SKILLS

Programming Languages: Python, SQL, JavaScript

Backend Development: Django, Django REST Framework, REST APIs, Django Channels, WebSockets

Databases: PostgreSQL, MySQL, SQLite

Infrastructure & Backend Services: Redis, Celery, Elasticsearch, Docker, Nginx, Daphne

Authentication & Security: JWT, TOTP 2FA, RBAC, CSP, HSTS, Rate Limiting

Payments: Stripe, JazzCash, EasyPaisa

AI & Machine Learning: Ollama, Qwen 2.5, NumPy, Pandas, OpenCV, Face Recognition, YOLO

Frontend: HTML, CSS, Tailwind CSS, Vanilla JavaScript

Tools: Git, GitHub, GitHub Actions, Postman, VS Code

PROJECTS

FaizanMart — Multi-Vendor E-Commerce Marketplace

Technologies: Python, Django REST Framework, PostgreSQL, Redis, Elasticsearch, Celery, Django Channels, Docker

Built a portfolio-grade multi-vendor e-commerce marketplace with Django REST Framework, spanning 19 Django apps, including 17 database-backed apps, 55 database models and seven role-based user types.

- Designed and implemented a role-based multi-vendor marketplace with queryset-level vendor-ownership enforcement, letting vendors manage independent stores, catalogs and orders while customer orders automatically split per store.
- Implemented JWT access/refresh authentication with logout blacklisting, email verification, password reset and TOTP 2FA, plus session/device tracking with revocation, HSTS, secure cookies, a Content Security Policy and scoped DRF rate limiting.
- Built Elasticsearch-powered product search with typo tolerance, "did you mean" suggestions, synonym matching and natural-language brand/price filter extraction.
- Integrated Stripe PaymentIntents with webhooks, JazzCash, EasyPaisa, Cash on Delivery and an internal wallet, with pricing, shipping and tax always calculated and validated server-side rather than trusting client-supplied values.
- Implemented multi-warehouse inventory with reserved vs. available stock, low-stock alerts, order-status state transitions, returns, shipping rules and delivery assignment.
- Developed real-time customer-vendor/support chat over Django Channels with JWT-authenticated WebSocket connections, and offloaded async/scheduled work to Celery and Celery Beat behind Redis.
- Built a local LLM-powered shopping assistant using Qwen 2.5 via Ollama, grounding responses in live Elasticsearch results and supporting English, Urdu and Roman Urdu queries.
- Strengthened reliability and security through GitHub Actions CI testing with PostgreSQL, Redis and Elasticsearch service containers, resolving issues including client-side price trust, stored XSS, CSP failures, coupon-scope leakage and N+1 queries.

GSMS — General Store Management System

Technologies: Python, Django, PostgreSQL, Tailwind CSS, JavaScript

- Designed 13 feature apps covering products, inventory, purchases, sales, customers and suppliers, modeled across 51 database models in PostgreSQL with low-stock and expiry tracking.
- Built 127 URL routes powering 50+ platform features, including customer/supplier ledger tracking, expense/income tracking and profit calculation.
- Configured 42 Django Admin registrations for centralized data and audit management, delivered with a responsive Tailwind CSS interface.

GitHub: github.com/MFaizan108/GSMS-Django-Project

Portfolio Website

Technologies: Python, Django, HTML, CSS, JavaScript

- Built and deployed a personal portfolio site to showcase FaizanMart, GSMS and other projects alongside technical skills.

EDUCATION

Bachelor of Science in Artificial Intelligence (BS AI)

The Islamia University of Bahawalpur (IUB) | Expected Graduation: 2028

Relevant Coursework: Object-Oriented Programming, Data Structures & Algorithms, Database Systems, Artificial Intelligence, Machine Learning
